

Abstract

APPARATUS FOR PRINTING USING NON-OVERLAPPING

5 A method of printing an image is disclosed. The method comprises generating at a host
(102), from an image (600) to be printed, a display list representation (312) of a visually
equivalent image (1100) comprising non-overlapping graphic objects (614', 616'); and
scan-line rendering (510), using the display list representation (312), the visually
equivalent image (1100) at a printer (108) communicating with the host (102), without
10 performing overlap detection at the printer (108).
